1. $\langle \text{main} \rangle ::= \text{main: } \{ \langle \text{program} \rangle \}$
2. $\langle \text{program} \rangle ::= \langle \text{statements} \rangle$
3. $\langle \text{statements} \rangle ::= \langle \text{statement} \rangle | \langle \text{statements} \rangle + \langle \text{statement} \rangle$
4. $\langle \text{statement} \rangle ::= \langle \text{cond_statement} \rangle | \langle \text{loop} \rangle |$
 $\langle \text{single_statement} \rangle | \langle \text{statement} \rangle$
5. $\langle \text{cond_statement} \rangle ::= \langle \text{If_statement} \rangle | \langle \text{Else_If_statement} \rangle | \langle \text{else_statement} \rangle$
6. $\langle \text{If_statement} \rangle ::= \text{if } (\langle \text{exprs} \rangle) \{ \langle \text{statements} \rangle \}$
7. $\langle \text{Else_If_statement} \rangle ::= \langle \text{If_statement} \rangle \text{ else_if } (\langle \text{exprs} \rangle) \{ \langle \text{statements} \rangle \}$
8. $\langle \text{else_statement} \rangle ::= \text{else } \{ \langle \text{statements} \rangle \}$ can we write else without if?
9. $\langle \text{loop} \rangle ::= \langle \text{for} \rangle | \langle \text{while} \rangle$
10. $\langle \text{for} \rangle ::= \text{for } (\langle \text{varName} \rangle = \langle \text{expr} \rangle ; \langle \text{expr} \rangle ; \langle \text{doInLoops} \rangle) \{ \langle \text{statements} \rangle \};$
11. $\langle \text{while} \rangle ::= \text{while } (\langle \text{expr} \rangle) \{ \langle \text{statements} \rangle \};$
12. $\langle \text{single_statement} \rangle ::= \langle \text{varDeclaration} \rangle | \langle \text{return_st} \rangle | \langle \text{arrDec} \rangle | \langle \text{varAssign} \rangle$
 $> | \langle \text{constIntDecAssign} \rangle | \langle \text{constStringDecAssign} \rangle |$
 $\langle \text{varDecAssign} \rangle | \langle \text{func_call} \rangle$
13. $\langle \text{varDeclaration} \rangle ::= \text{let } \langle \text{varName} \rangle = \langle \text{expr} \rangle | \text{let } \langle \text{varName} \rangle = \langle$
 $\text{arithmeticOperator} \rangle;$
14. $\langle \text{varAssign} \rangle ::= \langle \text{varName} \rangle = \langle \text{number} \rangle;$
15. $\langle \text{varDecAssign} \rangle ::= \text{let } \langle \text{varAssign} \rangle;$
16. $\langle \text{constIntDecAssign} \rangle ::= \text{const } \langle \text{varName} \rangle = \langle \text{number} \rangle;$
17. $\langle \text{constStringDecAssign} \rangle ::= \text{string } \langle \text{varName} \rangle = \langle \text{string} \rangle;$
18. $\langle \text{return_st} \rangle ::= \text{return } \langle \text{exprs} \rangle;$
19. $\langle \text{arrDec} \rangle ::= \text{list } \langle \text{varName} \rangle;$
20. $\langle \text{arrInit} \rangle ::= \langle \text{varName} \rangle = \{ \langle \text{insideOfList} \rangle \}$
21. $\langle \text{insideOfList} \rangle ::= \langle \text{varName} \rangle | \langle \text{constant} \rangle | \langle \text{varName} \rangle , \langle \text{insideOfList} \rangle | \langle \text{cons}$
 $\text{tant} \rangle , \langle \text{insideOfList} \rangle;$
22. $\langle \text{arraySizeSpecifier} \rangle ::= \sim$

55. <digits> ::= 0|1|2|3|4|5|6|7|8|9

56. <comments> ::= #<string>;|#<string><comments>;

57. <print> ::= print(<number> | <expr> | <string>)

58. <print_line> ::= print_line + <print>

Bilkent University | Department of Computer Engineering

A paragraph explanation for each language construct (i.e. variables and terminals) detailing their intended usage and meaning, as well as all of the associated conventions:

Terminals:

lower_lets: These terminals represent lowercase letters (a-z) and are primarily intended for naming variables and strings in code.

upper_let: These terminals denote uppercase letters (A-Z) and serve the same purpose as lowercase letters, enabling to create case-sensitive variable and string names.

special_buts: This terminal stores various special characters such as '/', '!', ',', '*', '&', '^', '%', '\$', '#', '@', '!', and which can be included in strings and varNames.

digits: The digits terminals represent numerical digits (0-9) used for numeric values.

string: The string terminals signify string literals, using lowercase letters, uppercase letters, numbers, and special characters.

compare: These terminals define comparison operators like '<,' '>,' '<=,' '>=,' '==,' and '!='. They are mostly used for conditional statements and loops.

increment and decrement: Incrementing or decrementing within loops mostly.

plusEqual and minusEqual: for faster reassigning or updating the current value of varName.

arithmeticOperator: These terminals uses various arithmetic operators, such as addition, subtraction, multiplication, division, modulus, and exponentiation.

boolOperator: The boolOperator terminals define Boolean operators like 'not,' 'or,' 'and,' and 'xor.' Mostly are used in loops or/and cond_statements.

Non-Trivial Token Definitions:

Comments (e.g., #<string>): Comments start with a '#' symbol, followed by a string. Efficient for writing comments to better understand it.

Identifiers (e.g., <varName>): Variables are defined using a combination of lowercase and uppercase letters, digits, and special characters. Eg: elma23

Literals (e.g., <string>, <number>): String literals encompass a wide range of characters, including lowercase and uppercase letters, digits, and special characters, to represent text data. Numeric literals are represented by digits and can include a negative sign for negative numbers.

Reserved Words (e.g., 'if,' 'else,' 'for,' 'while,' 'let,' 'string,' 'const,' 'return,' 'list,' 'func,' 'read,' 'print,' 'print_line,' etc.): let is for declaring integer value to varName. If, else, else_if are for conditional statements.
